### Conditions for No Spray Zone

To be included on the Manawatu District Council No Spray Register, the applicant agrees to take over the responsibility for the following:

- 1 Eradicating all noxious and pest plants (a list of pest plants is available from Horizons Regional Council).
- 2 Keeping growth in any roadside water table/drain under 150mm to allow the free passage of water at all times.
- 3 Maintaining visibility requirements around road signs, edge marker pegs, other road furniture, access-ways and intersections by keeping vegetation under 150mm at all times. A distance of one metre around the feature is typically appropriate.
- 4 The applicant will be required to pay for the supply and installation of marker pegs that identify the berm outside your property to Council's vegetation contractors as a No Spray Area. These yellow marker pegs are required at either end of the No Spray areas. It is the responsibility of the applicant to ensure that these marker signs remain clearly visible at all times. You may require more than one set depending on size of your boundary and how many roads border it. The installation of the pegs will be at the owners cost which will be quoted and must be paid for prior to installation. The application and payment for pegs must be paid for prior to inclusion to the no spray register.
- 5 If the above conditions are not maintained and the spraying contractor observes an overgrown frontage at the time of spraying, the applicant may be invoiced for additional costs associated with the spraying contractor returning to spray the area as normal.

The berms outside of the applicants property may be audited randomly to ensure that they do not contain pest plants. Council reserves the right to control pest plants in the berm if there is no evidence of these being adequately controlled.

The road maintenance contractor will still mow the frontage of the property, unless the applicant mows it. This will be on both sides of the road and the strip will be 1.8m wide where possible or to the centre of the drainage ditch, whichever is the closest to the road.

Please advise Manawatu District Council if there is any change in circumstances which would mean that the No Spray area is no longer required.

## Declaration

I agree to comply with the conditions set out above and understand that if I fail to meet the conditions as stated Manawatu District Council reserves the right to spray the area.
