TREE – Notable Trees

NOTE: Text that is yellow highlighted underlined or shown with ~~strikeout~~ shows amendments to Proposed Plan Change H(b) Notable Trees as a result of submissions.

Introduction

Increasingly, trees are being recognised for their intrinsic role in enhancing urban and rural environments. They may be of a particular size, form, age, or rarity, or important historic heritage or cultural value which makes them significant. Trees also contribute to community wellbeing and may have important intrinsic value. Such trees may be recognised through listing in the District Plan as Notable Trees.

Manawatū's Notable Trees are those that are recognised and protected for one or more of their botanical, landscape, amenity, historic heritage or cultural values. These trees may be prominent natural features and landmarks, add character and identity to the neighbourhood, be rare species, good specimens or have an association with special sites or events. Trees may be identified as an individual or groups and include both exotic and indigenous species.

Notable Trees have been assessed using the Standard Tree Evaluation Method (STEM) from the publication Flook, R.R. (1996) STEM A Standard Tree Evaluation Method, Nelson, New Zealand. STEM assesses trees based on condition (health) and amenity (community benefit) as well as notability (distinction).
